Contemporary stone management in Jordan

A.N. Al Shunaigat

Jordanian Association of Urological Surgeons, Amman, Jordan

Stone disease is by far, the most presenting urological pathology to emergency rooms worldwide. Presentation varies from simple colic to the extremes of severe renal impairment and uro-sepsis. Historically, urinary stones are known since the dawn of the history and mentioned in different citations.

Management of urinary stones had passed through different and successive eras, and the passed 2 to 3 decades had witnessed a great evolutions in the management.

Jordan is not away from this evolutions, and there happened a great change and advancement in stone management here too.

In my talk, I would like to highlight the methods of management of urinary stones in Jordan together with the recent advances and compare outcome between different modalities.
